

Prospective Nonprofit Guide

Summer of Maps is a 12-week program that provides competitive fellowships to students and matches them with challenging spatial analysis projects with nonprofit organizations. We are a [B Corporation](#), a social enterprise that applies the power of business to effect change. Our mission is to apply geospatial technology for positive social and civic impact as well as to advance the state-of-the-art through research. While we are primarily a software engineering and data analytics firm, we give back to the communities we serve in many ways, including contributions to open data and open source projects, donating a portion of our profits, hackathon participation, and pro bono work.

We are convinced that much of the potential of geospatial technology is not being realized, particularly in the nonprofit sector. Summer of Maps is a program we launched in 2012 to address this. The program offers stipends to student spatial data analysts to apply their skills on projects for nonprofit organizations. Each year we match talented students of GIS with nonprofit organizations that have high quality geospatial data sets and interesting spatial analysis questions. The students work with our Summer of Maps team to implement the projects over a three-month period during the summer.

The program has several objectives:

- Provide a **high quality first professional experience** for students with advanced geospatial analysis skills in order to prepare them to become the next generation of GIS professionals.
- Develop **useful geospatial analysis deliverables** that can be used to improve the operations of nonprofit organizations that would otherwise not be able to do so.
- Demonstrate the potential for use of geospatial data science to **improve the impact and operations** in the nonprofit sector.
- **Grow the nonprofit GIS marketplace** by encouraging sophisticated projects and delivering significant and useful results.

Fellows are provided a \$5,000 stipend and one-on-one mentoring by staff on Azavea's Summer of Maps team during their 12-week fellowship while the nonprofit organizations receive sophisticated analysis and visualization of their data. Each fellow works with two nonprofit organizations as part of the Summer of Maps team in Azavea's Philadelphia office.

Applying to the program

The application period for nonprofits begins in January and lasts approximately three weeks. We invite nonprofit organizations with spatial analysis and geographic visualization needs to submit their project ideas.

At this stage, we are looking for nonprofit organizations with spatial analysis and geographic visualization needs to submit their project ideas. Some examples of potential projects include:

- **Environment, Sustainability and Ecosystems** - analyze the urban tree canopy and existing development to make a recommendation for future preservation
- **Public Safety** - analyze the impact of neighborhood indicators or other environmental factors on crime risk
- **Public Health & Food** - develop three potential sites for a new soup kitchen and perform a market analysis to determine how each will affect existing sites
- **Community & Economic Development** - analyze housing needs to determine the best site for a new low income housing development
- **Transportation** - identify the next 10 streets for the addition of bike lanes by scoring all street segments based on a variety of geographic criteria

Organizations are limited to two project submissions. Nonprofits may submit two projects, but they should do so as separate applications rather than trying to combine them into a single application. Azavea will review the projects then shortlist about 12-18 before making them available to students. Because parts of the proposal will be made public (with contact information removed), no proprietary or confidential information should be submitted. Students will select the projects they are interested in working on from the finalists so it's important to consider how students will engage with the submitted project.

What Defines a Successful Project Application?

To be successful, a project proposal should have the following characteristics:

- A primary focus on geographic data analysis
- A clear idea of what type of analysis to be performed
- A clear set of deliverables by which the student can measure their progress
- All appropriate data sets that incorporate geographic information the organization plans to provide (addresses, census tracts, zip codes, etc.) should be in hand by May 15 - projects that will require a lot of data gathering by students are unlikely to be successful
- A clear connection between the proposed analysis project and the organization's mission
- Not a project that could be completed with in-house resources - in other words, if the organization already has a lot of GIS analysis capacity and are just looking for some free labor for the summer, the proposal is much less likely to be successful
- Not include manual data digitization, software building or other work beyond the scope of the program.

More sophisticated projects are likely to be more attractive to Azavea and to students, so if the nonprofit just needs to put some dots on a map, this may not be the right program. We're looking for analysis or visualizations projects that pose tough, challenging or intriguing questions and will require innovative ideas and thinking to solve.

Eligibility

The program is limited to registered nonprofit organizations with 501(c)3 designation in the United States. We invite international organizations to apply if they have a registered U.S. affiliate that will be the primary contact for the work.

General Expectations and Commitments

Azavea strives to make the Summer of Maps a rewarding program for the fellows and nonprofits. In order to do so, we expect that the nonprofit will be engaged with the work and fellow throughout the course of the summer.

We expect the selected nonprofit to commit to:

- A primary and secondary single point of contact for the fellow to coordinate with. This point of contact will make themselves available for status calls, presentations, questions and clarifications about the project and data.
- Delivering all necessary project data by the delivery due date in mid-May
- Attending a kick-off meeting the first week of the program and **at least** bi-weekly status calls with the fellow
- Provide timely feedback for deliverables when requested by the fellow
- Attend a final presentation where the fellow presents the work they have accomplished over the summer

Timeline

Applications for nonprofits open in January and remain open for two weeks. After the submission due date has passed, the Summer of Maps team will review applications and select about 12-18 projects rigorous enough to pass on to the student application. The nonprofits with selected projects will be contacted by the Program Coordinator in February before the student application period has opened. The Program Coordinator will summarize the finalist projects and create a public document listing the details of each project that the student applicants will use to select their projects.

Student applications open in late February and each applicant can select three projects from our selected list to work on. Once the final students are selected, sometime in April, the nonprofit projects they selected to work on will be chosen as the selected organizations. Organizations will be notified by the Program Coordinator in April if they have been selected. In May, nonprofits will be contacted and asked to deliver their project data in advance of the beginning of the program. Nonprofits will also be contacted to set up kick-off meetings and be introduced to the fellow that will be working on the project. The fellowship will kick off in early June, with kickoff meetings with the Summer of Maps team and the fellows, as well as a welcome happy hour located in Philadelphia. The fellowship concludes in mid-to-late

August with a presentation held at the nonprofit's office (or remotely via webinar if not feasible) and a closing reception at the Azavea office. Nonprofits are sent a survey post-fellowship in September and coordinate with Azavea's marketing staff around press information.

Data Delivery

Azavea asks that selected nonprofits deliver project datasets ahead of time. The Summer of Maps Program Coordinator will notify the nonprofits they have been selected and provide an FTP server to deliver data to. Data delivered should, at the very least, be all the pertinent nonprofit organizational data specified as "data on-hand" in the application.

Communication

Selected nonprofits must name one main point of contact and a secondary point of contact. We expect that this main point of contact will be well-versed in the details of the project and be able to answer emails and phone calls from the fellow should any questions arise. Communication will mainly take place via email with **at least** bi-weekly status calls with the fellow.
